DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 40-47, 53-58, and 64, drawn to a server system for allocating bandwidth among users connecting to a server, classified in class 709, subclass 226.
- II. Claims 48-52, 59-63, and 65, drawn to a client system for allocating bandwidth among processes in a client, classified in class 709, subclass 233.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are used for different purposes and in different environments. Invention I discloses a particular system for allocating bandwidth among users accessing a server. This server system includes a specific bandwidth allocation technique and process. Invention II discloses a client system for allocating bandwidth among processes running in a client machine. The client system includes a separate and distinct bandwidth allocation process from the one used in the server system.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2153

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
